

## Press Release

Pinneberg, 9th December 2014

# IR/HotAir Dryers for Printing and Coating Applications

From **10 - 12 March 2015 Eltosch Grafix GmbH** present their high tech UV and IR/HotAir drying systems for the converting industry at **ICE Europe in Munich**. Visitors get informed about an innovative **Infrared/HotAir system** for drying water based coatings and for many printing applications. The modular high-performance drying units of the **Hi-Jet E-Line** series stand out by performance, compact design and efficient drying.

Another show highlight is the **IR Power Jet**. This very compact and highly efficient IR drying module can be integrated perfectly in any production line for drying water based coatings as well as printing and inkjet inks.

The high-end UV module **LightGuide** captivates by its optimized overall concept. Due to an unique reflector system combined with an electronic power supply this compact and service-friendly UV module achieves the highest UV yield possible, which is pointed out by a BG-certification for energy-minimized drying.

**Visit Eltosch Grafix at the ICE Europe, hall A5, booth 852**, which they share with two other members of the Hönle Group, Hönle and PrintConcept.
